

WE ARE HIRING

AI Workflow Automation Developer

Prodesign is looking for an AI Workflow Automation Developer to join our team in Mauritius. We are a consulting engineering firm improving the way we use digital tools in our day-to-day work, and we are looking for someone who can help us build practical internal workflows, connect different software platforms, automate repetitive tasks and support the careful use of AI within our business.

This is more than a traditional IT support role. We need someone who enjoys building useful systems, solving practical problems and turning business requirements into working digital workflows.

What You Will Do

You will help us build the next generation of internal digital tools for a consulting engineering firm. Your work will turn real business and engineering problems into smart, practical workflows that save time, improve quality and make information easier to use. You will be involved in:

- Designing and building automation workflows that connect people, documents, data and AI tools.
- Integrating platforms such as n8n, SharePoint, Supabase/PostgreSQL, OpenAI/Claude APIs and Google AI Studio.
- Writing Python scripts to process documents, structure data, run checks and support intelligent workflows.
- Creating systems that can read, organise, retrieve and review information more effectively.
- Helping transform manual, repetitive processes into faster and better-controlled digital workflows.
- Testing, improving and refining workflows so they are reliable before being used by the team.

How You Will Work

You will join an internal team that has already started working on digital and AI-enabled workflows. You will be given the business context, the expected outcomes and the main priorities, but you will also be expected to work independently, take initiative, research solutions, solve problems and take ownership of assigned tasks. This role requires someone who can move from an idea or requirement to a working workflow, test it properly, document it clearly and deliver within agreed timeframes.

What We Are Looking For

We are looking for someone who has experience, or strong interest, in:

- Python.
- n8n, Power Automate, Make, Zapier or similar automation tools.
- REST APIs, webhooks and JSON.
- SQL, PostgreSQL, Supabase or similar databases.
- Microsoft 365 and SharePoint.
- OpenAI API, AI tools or workflow-based AI integration.
- Document processing using PDF, Word, Excel or structured data.

It Would Be a Plus If You Also Have

- Vector databases, embeddings or RAG.
- Microsoft Graph API.
- Power BI or dashboards.
- OCR or document intelligence tools.
- Git or version control.
- Basic web app development.
- Engineering, construction, BIM or technical document workflows.

The Type of Person We Need

- Curious and practical.
- Comfortable learning new tools.
- Organised in the way they work.
- Able to break a process into clear steps.
- Careful with data, documents and testing.
- Able to work with minimum supervision once a task is agreed.
- Willing to take ownership and follow through until completion.
- Able to explain technical work in simple language.

Location

This is an office-based role in Mauritius. The selected candidate will work from our office, as close collaboration with our team will be important for understanding our processes, priorities and internal systems.

How to Apply

Please send your CV, a short note about your experience with automation, Python, APIs, databases or AI tools and **copies of all certificates** on admin@prodesign.mu by latest **30 September 2026**.

Note

- *The company reserves the right to call only the best qualified candidates for the selection exercises.*
- *The company also reserves the right not to proceed with the vacancies.*
